

IJN URANAMI Japanese destroyer Fubuki class - MODEL HOBBY POLAND

Послан konradoo - 10.03.2012 22:18

Hi all, in my next relationship. I would like to present my next model IJN URANAMI Japanese destroyer Fubuki class, I chose this model because of its good development and large number of additives which offers us the publisher. I apply it during the construction of the model. Historical skip to interested model shows a replica of the units in December 1941 with Destroyer Squadron 19go.

Cover:

http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/th_ModelHobby05IJNuranamistampa400.jpg

Part 1 FRAME

The construction started with the skeleton stiffening elements on thin paper to cardboard thickness of 1 mm, in their models only used cardboard beer because it is easy to work with a saturated Super Glue becomes very stiff and it is easier to derive the edges with sandpaper. When you cut a whole and several pasowaniach glue together all together. See the photos.

I glued then cut the deck and hull to check his fold, so far no COMMENTS

http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000021.jpghttp://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000025.jpg

at the end and somehow I decided to fill hard-ship, so pasted two pins so that the model did not fly on the stand but more on that later ...

http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000024.jpg

Feel free to comment and evaluate my work!

Welcome to our site!

A good start!

I'll be happy to watch the construction of this model! Good luck!

Илья, гугл-переводчик отлично справится с переводом, и если захочешь ответить или что-то спросить, то в нем же можно перевести и с русского на английский. Это совсем несложно.

Hi all

Part 2 bottom of the ship

I started work on the bottom plating of the destroyer, according to the taping instructions first plating bar in the middle of the skeleton. From this activity depended on whether the entire hull will be well done, the author proposes the implementation of the shell alternately ie one piece in the direction of the bow then one piece toward the stern, and so for a change. I decided to go in the direction of the bow and stern address.

http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000026.jpg
http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000028.jpg
http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000029.jpg
http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000033.jpg

Stern longship was a very difficult element is mounted on the bar segments to better build their thatch.

http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000030.jpg
http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000032.jpg
http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000031.jpg
http://i1201.photobucket.com/albums/bb344/Paprykarze/Portal/Konrad/URANAMI/th_0000034.jpg

To sum up some items I could have done better, but overall I'm happy with the resulting effect and with the same model. Sheathing is perfectly fitting, and so far the model is not caused me too many problems but this is only the beginning. At the moment I leave the hull on its side and begin to work on the construction of the superstructure is due to a high percentage of work trips.
